

Senior Associate in Pediatrics, Division of Emergency Medicine, Boston Children's Hospital
President, Injury Free Coalition for Kids
Director, Academic Pediatric Association Health Policy Scholars Program
Associate Professor of Pediatrics and Emergency Medicine, Harvard Medical School

Dr. Lois Lee's clinical and academic pursuits are focused on improving the medical care and lives of children. Her work focuses on childhood injury prevention, firearm safety, pediatric trauma care, health policy, and diversity in medicine. This is grounded in her clinical work as a pediatric emergency medicine physician at Boston Children's Hospital and Associate Professor of Pediatrics and Emergency Medicine at Harvard Medical School.

She actively advocates for child health with her passions for promoting health and preventing injuries to children and adults. She does this through her clinical care, research, and advocacy. Her research and advocacy are focused on health disparities and how policy affects health related to injuries and access to medical care. She completed the Nick Littlefield Health Policy Fellowship at the Network for Excellence in Health Innovation (NEHI) where she worked as a health staffer for Senator Sheldon Whitehouse (D-RI). She currently serves on the Senior Advisory Board of the Office of Health Equity and Inclusion and on the hospital's Ethics Advisory Committee. She is excited about training the next generation of academic pediatric advocates as the Director of the Academic Pediatric Association's Health Policy Scholars Program.
