

BCH Academy Spring Education Retreat

Working Group – Curriculum Development Exercise

The overall aim of the working group exercise is to collaboratively develop a curriculum using ChatGPT, experimenting with various prompting structures and education design strategies. Topic options include:

- 1. Managing a patient with agitation**
- 2. Obtaining informed consent for a procedure**
- 3. Delivering difficult news**
- 4. Facilitating transition to adult care for adolescents with chronic conditions**

After your group agrees on a topic, work together to develop prompts for your facilitator to input into ChatGPT for each step of the curriculum development process. Please note: there is no formal report-out for this exercise.

Get creative, have fun, and don't be afraid to explore and try out-of-the-box ideas together!

Step	Curriculum Development Steps	Group Objective
1	Needs Assessment of Learners	Use ChatGPT to suggest methods for identifying knowledge and skill gaps for the topic chosen.
2	Learning Objectives	Develop learning objectives using ChatGPT, with a focus on using active verbs and higher cognitive skills
3	Teaching Strategies	Explore interactive and innovative teaching approaches with ChatGPT assistance
4	Assessment of the Learners	Develop assessment strategies that can accommodate different learner levels
